

ANTI FOG NANO COATINGS FOR INDUSTRIAL AND DIY APPLICATION

TECHNOLOGY

NanoMagic Anti Fog Coatings are based on German formula, the recognized global leader in nano coatings if comes to quality, durability and performance. Leveraging the unique integration of Nanotechnology with Sol-Gel Chemistry the German scientists has led to the development of new technologies that transform the performance of anti-fog coating. It is our honour to share the technology with you.

PERMANENT ANTI FOG COATING FOR INDUSTRIAL APPLICATION

Magic Anti Fog HD – water based coating of excellent hardness and permanent anti-fog properties designed for glass and plastic. The coating also has excellent boiling water and freezer resistance. It is formable, and can be, flow coated or spray coated. Coating needs curing in 130°C. It is ideal to use on head lamp diffusers, lenses, visors, glasses, optical sensors, etc.

TEMPORARY ANTI FOG COATING FOR DIY APPLICATION

Magic Anti Fog DIY – alcohol based nano coating is designed for easy DIY application and curing in room temperatures. Coating characterise long lasting but temporary anti fog performance. It can be successfully used in post manufacturing process or in home environment.
